

IDS2Eval Scorecard

cic-ids2017

6 ok · 4 warning · 2 flag · 12 checks

REVIEW REQUIRED

dedup_check	train duplicates: 0 (0.00%); test rows leaking a train feature-match: 0 (0.00%); test-internal duplicates: 0	ok
label_conflict_check	no feature vector maps to more than one label	ok
leakage_screen	no single feature or pair dominates importance (top1=6.7%, top2=12.7%)	ok
one_rule_check	single rule 'Bwd Packet Length Std <= 1495' reaches 90.0% test accuracy (89.0% train)	ok
identity_column_flag	standalone AUC by column: {'Destination Port': 0.929}. Suggest dropping: ['Destination Port']	flag
temporal_leakage_check	no schema.timestamp_column configured	ok
homogeneity_test	12 classes tested; leakage signature (test significantly closer than control, p<0.05) in: ['DoS Slowhttptest']	flag
class_distribution_report	15 classes, train imbalance ratio (majority:minority) = 185530:1; classes below 1% of train: ['DoS GoldenEye', 'FTP-Patator', 'DoS slowloris', 'DoS Slowhttptest', 'SSH-Patator', 'Bot', 'Web Attack ⚔ Brute Force', 'Web Attack ⚔ XSS', 'Infiltration', 'Web Attack ⚔ Sql Injection', 'Heartbleed']	warning
low_cardinality_warning	unique values by column: {'Destination Port': 51291}	ok
schema_fingerprint_check	matched extractor signature(s): ['CICFlowMeter']	warning
data_integrity_check	missing values in 1 feature column(s); +-inf values in 2 feature column(s); 8 constant/near-constant feature(s)	warning
known_issue_lookup	The traffic capture has packet disorder and duplication, and some attacks that were actually launched are not correctly labeled as attack traffic in the released CSVs. (Engelen et al. 2021, IEEE S&P Workshops (WTMC)); An independent re-labeling audit measured a 6.67% overall label corruption rate, with some individual attack classes above 75%; Heartbleed alone is only 11 rows (about 0.022% of the dataset), too few to evaluate reliably regardless of labeling accuracy. (Cantone et al. 2024, IEEE Access)	warning
